

1.12

Micromechanics of Linear Elastic Continuous Fiber Composites

M. W. HYER

Virginia Polytechnic Institute and State University, Blacksburg, VA, USA

and

A. M. WAAS

University of Michigan, Ann Arbor, MI, USA

1.12.1 INTRODUCTION	346
1.12.2 IDEALIZATION OF MICROSTRUCTURAL GEOMETRY	346
1.12.3 STRENGTH-OF-MATERIALS MODELS	346
1.12.3.1 Extensional Modulus E_1	347
1.12.3.2 Major Poisson's Ratio ν_{12}	348
1.12.3.3 Extensional Modulus E_2	348
1.12.3.4 Shear Modulus G_{12}	350
1.12.3.5 Extensional Modulus E_2 , Alternative Model	351
1.12.3.6 Coefficients of Thermal Expansion α_1 and α_2	353
1.12.4 COMPARISON OF RESULTS FROM STRENGTH-OF-MATERIALS AND FINITE-ELEMENT MODELS	354
1.12.4.1 Extensional Modulus E_1	356
1.12.4.2 Major Poisson's Ratio ν_{12}	356
1.12.4.3 Extensional Modulus E_2	357
1.12.4.4 Shear Modulus G_{12}	357
1.12.4.5 Coefficients of Thermal Expansion α_1 and α_2	357
1.12.5 MODIFIED EXPRESSIONS FOR E_2 AND G_2	359
1.12.6 MORE ADVANCED MODELS	361
1.12.6.1 Concentric Cylinders Model	362
1.12.6.2 Analysis of the Concentric Cylinders Model	365
1.12.6.3 Computation of E_1	366
1.12.6.4 Computation of C_{11}	367
1.12.6.5 Computation of K_{23}	368
1.12.6.6 Computation of G_{12}	368
1.12.6.7 Shear Modulus G_{23}	370
1.12.7 SUMMARY	374
1.12.8 REFERENCES	375
